

HOW TO RUN:

Use Ubuntu.

```
cd b09901154_hw3
```

```
python main.py
```

Then, you can get a plot of the initial position of 100 MS and a csv file including all the information of the handoff.

In addition, the output on the terminal is the times of the handoff events.

e.g. total_times_of_handoff = 2248
